Alle innvendige skjøter skal tettes med vedlagt varmebestandig silikon. Se også bilder.

Beskytt huden med vedlagt engangshansker.

Legg på en tynn streng, og dra lett over med en finger

Start med brennkammerseksjonen før de gule skamolplatene monteres.

Forsett tettingen for hver seksjon som monteres, men ha ikke på silikon rundt de horisontale røklederplatene av kleberstein, da disse skal kunne demonteres ved feiling.

All inside vertical and horizontal joints have to be sealed with the fire proof silicon provided.

Start with the burn chamber section, before the yellow Skamol plates are being put in place.

After putting the next section of stones on top of the burn chamber also seal all those joints.

Do this for as many sections as there are above the burn chamber.

Protect your skin, use the provided gloves!

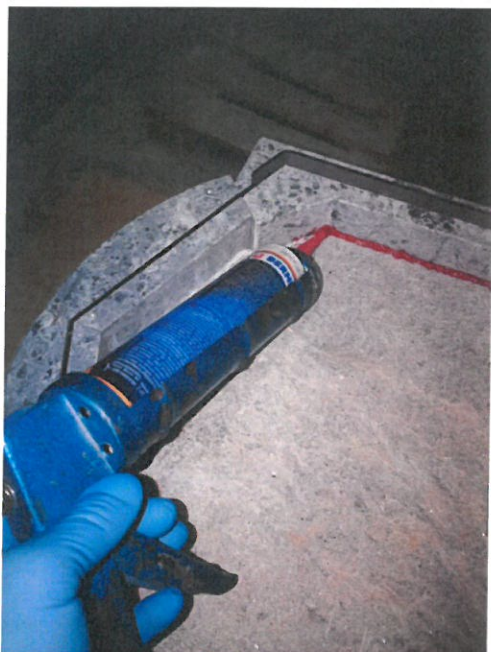

Alle Innenfugen müssen mit dem mitgelieferten, hitzebeständigen Silikon abgedichtet werden. Siehe Bilder unten.

Zum Schutz der Haut bitte die mitgelieferten Einmalhandschuhe benutzen.

Einen dünnen Strang auftragen und leicht mit einem Finger nachziehen.

Mit der Feuerraumsektion beginnen, bevor die gelben Skamolplatten montiert werden.

Danach jede montierte Sektion abdichten. Auf keinen Fall Silikon auf die horizontalen Rauchzwischenplatten aus Speckstein auftragen, da diese zum Kehren ausgebaut werden können müssen.
